

Model

#TIL/dev/web/django

철학

A model is the single, definitive source of truth about your data. It contains the essential fields and behaviors of the data you're storing. Django follows the **DRY Principle**. The goal is to define your data model in one place and automatically derive things from it.

This includes the migrations - unlike in Ruby On Rails, for example, migrations are entirely derived from your models file, and are essentially a history that Django can roll through to update your database schema to match your current models.

모델은 single source of truth로써 의미가 있다. model이 시스템의 Entity에 대한 명세부터 DB Scheme까지 모두 정의한다.
